

Vehicle Inspections

A modern, electronic alternative to paper-based inspection forms

Safety and Uptime start with Inspections

Ensure timely data collection and reduce risk through a simple, electronic inspections process that helps fleet managers analyze trends and implement meaningful vehicle safety programs. Get notified of vehicle issues immediately, reducing the time to repair and keeping vehicles on the road.

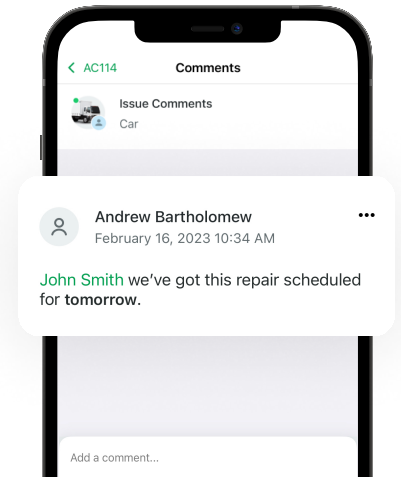

Eliminate Paperwork

Conduct inspections, submit photos and add comments all from your mobile device. With less to enter and data automatically saved in Fleetio, you'll save loads of time over traditional paper processes without costly added hardware.

Reduce Risks and Violations

Limit exposure to vehicle violations and maintenance-related accidents. Keep your operators and other road users safe and keep your insurance claims in check with regular inspections. With custom notifications, your team can take action immediately after inspections criteria fail.

Increase Driver Accountability

Scheduled vehicle inspections help alert drivers when inspections are due. Routine inspections promote a culture of safety and accountability. Empower drivers to care for their vehicles, address issues immediately and prevent breakdowns and costly delays to fleet productivity.
