

Fleetio + **Motive**

Track, Analyze & Improve Fleet Operations

Seamlessly integrate your Motive devices with Fleetio

Admin Users can log in to their Fleetio account and select Vehicles > GPS Integrations from the menu on the left to add their Motive credentials.

All Motive devices are then listed and can be mapped to the appropriate asset in Fleetio.

Benefits

	
 Location	→ Easily see a vehicle's current location, driving status and more right on the vehicle profile page in the Fleetio user interface.
 Odometer readings	→ Odometer readings automatically sync every day at midnight in your account's time zone), or you can use the one-click option to manually trigger a sync at any time. The days of retrieving odometer readings from drivers and loading them into Fleetio are over!
 Faults/DTC/Alarm Codes	→ Don't rely on drivers to tell you if their "check engine" light is on! Get an email notification when new fault codes are detected by your Keep Truckin devices, and create an issue in Fleetio from a fault code with one click (or choose to ignore it).
 DVIR Defects	→ Automatically create issues from failed inspection items from your Motive DVIRs. Quickly assign work for a speedy repair and resolution.
 Fuel Exception Reporting	→ Ever been suspicious of fuel theft? Now fuel card transactions are automatically compared against actual vehicle locations, and geolocation differences exceeding a certain threshold are flagged. Get a daily email summary and detailed map visualization of the occurrence.
 Import Devices & Assets	→ Bulk import your Motive devices and vehicles directly into Fleetio upon set-up. Spend less time manually importing vehicle lists from spreadsheets and spend more time planning maintenance schedules for your fleet.
